# Naol Demisse

Founder of AxionsLab

Silver Spring, Maryland, United States

## Summary

I'm a quantum theorist, systems architect, and founder of AxionsLab, where I explore the deep intersections of quantum physics, artificial intelligence, and intelligent software systems.

My research and engineering efforts span from building original entanglement frameworks like the Quantum Entanglement Coefficient (QEC) — to developing long-term models around spacetime, string theory, and emergent computation. My focus isn't just on solving today's problems, but on laying mathematical and infrastructural groundwork for next-generation physics and tech.

Alongside theoretical work, I engineer full-stack systems using Python, AI models, and quantum hardware. I'm currently designing interactive platforms for quantum simulations, AI automation, and secure computation — with a vision to unify intelligent systems with fundamental physics.

Always learning. Always building. The goal? Not just to understand reality — but to help shape it.

## Experience

AxionsLab

Founder

August 2024 - Present (1 year 7 months)

Ethiopia

- Founded AxionLabs to develop advanced solutions in quantum computing, AI, and defense tech.
  - Leading R&D initiatives focused on next-gen encryption and scientific simulation.
  - Managing technical teams, brand identity, and business growth strategy.
-

## Education

Udemy Alumni

Bootcamp, Full Stack Development · (May 2024 - August 2024)
